FACULTY OF PHARMACY UNDERGRADUATE GUIDEBOOK

Session 2019/2020

Welcoming Message from Dean

Welcome to the Faculty of Pharmacy, University of Malaya, a top 100 University in the QS World University Ranking!

I am welcoming you to the brand-new faculty that was established this year with the first Dean being appointed on the 1 September 2019. You are privileged to be the first batch to endure a four-year Bachelor in Pharmacy [B. Pharm. (Hons)] under

the new faculty. The Department of Pharmacy, Faculty of Medicine was established in 1995 and underwent the greatest transformation in history when it was awarded to be a Faculty in 2019.

Congratulations on choosing the right career path, the most diverse profession in the healthcare sector!

Pharmacists practice in a variety of areas including hospitals, communities, industries and regulatory. The four-year program will equip you for a professional career enabling you providing pharmaceutical care to the nation.

I hope you will be motivated throughout the four years and turn to become an inspiring world-class pharmacist with the highest integrity, interpersonal skills and leadership qualities.

Lastly, the faculty is committed to the provision and delivery of the best services to you through efficient management and relentless determination in continuous quality improvement of every aspect of our endeavour.

We look forward to rewarding ventures with you.

Thank You and Welcome on Board!

Assoc. Prof. Dr. Hasniza Zaman Huri Dean Faculty of Pharmacy University of Malaya

Vision, Mission and Objectives

Vision

To be a centre of excellence for pharmacy teaching and research.

Mission

To provide an overall and "broad-based" programme to give opportunity for specialisation and effective evidence-based practice. It is characterised by dynamics and forward-thinking.

Objectives

The objective of the Pharmacy programme is to produce pharmacists who are competent, possess professional skill together with high ethical standards and are well trained in delivery of Pharmaceutical Care as well as:

- To produce competent pharmacists capable of delivering quality pharmaceutical care that promotes positive health outcomes while functioning actively as healthcare team professional
- To be intellectually motivated to embrace lifelong learning
- To inculcate a spirit of respect for diversity and good citizenship

Programme Title, Philosophy, Principles and Outcomes

Programme Title

Title of the conferred degree: Bachelor of Pharmacy (Hons)

Programme Philosophy

The Bachelor of Pharmacy (Hons) degree programme that is offered by the University of Malaya holds true to the following philosophy, which is in line with the nation's requirements:

 The programme offers a broad-based curriculum and training with opportunities for specialisation. The programme supports evidence-based practices and consists of dynamic characteristics with room for future advancement.

Programme Principles

In line with the programme philosophy, the programme offered is based on the following principles:

- The basic training given is broad-based and encompasses all aspects of the pharmacy practice, from pharmaceutical sciences to its application in the field of clinical pharmacy.
- The programme utilises interactive teaching methods and incorporates evidence-based practices in an effort to promote critical thinking and analysis in all the taught disciplines.
- The education provided is dynamic and farsighted to equip the graduates to face current and future challenges.
- Emphasis is given on basic communication and thinking skills as well as the benefits of modern communication technology.
- The training encompasses the importance of patient/customer-oriented therapy as well as uses a multi-disciplinary approach to deliver effective and efficient healthcare services.

Programme Outcomes

The following are the programme outcomes where at the end of the programme the students are able to:

- **PO1:** Master in-depth and accurate knowledge towards current and future needs in all the areas of pharmacy.
- **PO2:** Formulate, analyse, manufacture medicines and resolve issues of pharmaceutical care.
- **PO3:** Demonstrate a responsible attitude and ability to interact courteously with members of the community.
- **PO4:** Act in a professional manner and with integrity in accordance with the Malaysian Pharmacy Code of Conduct.
- **PO5:** Communicate and cooperate effectively as a team member of healthcare professionals and demonstrate strong leadership capabilities.
- **PO6:** Apply pharmaceutical care skills to resolve health-related issues.
- **PO7:** Apply information management skills, life-long learning to foster professional development.
- **PO8:** Possess management and entrepreneurship skills in the various areas of pharmacy profession.

COURSE SUMMARY

YEAR I SEMESTER I (2019/2020)

OIA1001: Basic Pharmaceutical Chemistry

3 credits

Learning Outcomes

At the end of this course, students are able to:

- 1) describe the states of matter.
- 2) explain the principles associated with gases, liquids, solids, and solutions.
- 3) apply the concept of thermodynamics and kinetics in pharmacy.

Course Synopsis

This is an introductory module to physical principles that are applied in pharmaceutical sciences. This module emphasises on the importance of physical and chemical properties related to drugs and their dosage forms.

Reference Texts

- 1) Aulton, M.E., & Taylor, K.M. (2001). Pharmaceutics: The Science of Dosage Form Design (2nd ed.). Churchill Livingstone, UK.
- 2) Chang, R. (2005). Chemistry (8th ed.). McGraw Hill, New York.
- 3) Florence, A.T., & Attwood, D. (2006). Physicochemical Principles of Pharmacy (4th ed.). Pharmaceutical Press, UK.
- 4) Martin, A.N., Sinko, P.J., & Singh Yashveer (2011). Martin's physical pharmacy and pharmaceutical sciences: Physical Chemical and Biopharmaceutical Principles in The Pharmaceutical Sciences (6th ed.) Lippincott Williams and Wilkins, USA.
- 5) Beckett, A.H., & Stenlake, J.B. (2001). Practical Pharmaceutical Chemistry, Vol. 1 & 2 (4th ed.). Bloomsbury Academic, UK.

Course Coordinator

Dr. Chin Sek Peng

Course Assessment

OIA1002: Pharmaceutical Organic Chemistry

3 credits

Learning Outcomes

At the end of this course, students are able to:

- 1) state the functional groups, organic reactions, names, and structures of organic compounds.
- 2) explain how organic structures and bonds influence physical and chemical properties of a compound.
- 3) identify chemical substances in drugs and pharmaceutical usage.

Course Synopsis

The module describes a general view on the organic chemistry aspects to determine drug characters, which are important in pharmaceutical analyses and drug actions.

Reference Texts

- 1) McMurry, J. (2012). Organic Chemistry (8th ed.). Thomson-Brooks/Cole, USA.
- 2) Lemke, T.L., Roche, V.F., & Zito, S.W. (2011). Review of Organic Functional Groups. Introduction to Medicinal Organic Chemistry (5th ed.). Lippincott Williams & Wilkins, USA.
- 3) Barber, J., & Rostron, C. (2013). Pharmaceutical Chemistry. Oxford University Press, UK.

Course Coordinator

Dr. Leong Kok Hoong

Course Assessment

OIA1003: Biochemistry

3 credits

Learning Outcomes

At the end of the course the students are able to:

- 1) identify and explain the system of cell biology.
- 2) describe the chemical classification and metabolism of carbohydrates, lipids, amino acids, peptides, and proteins.
- 3) analyse the system bioenergetics, enzymes, vitamins and nucleic acids.
- 4) interrelate metabolism in humans.
- 5) analyse disturbances in the mechanisms of the immune system in the body and identify the most suitable methods of treatment and medicines used.

Course Synopsis

This module provides the knowledge on the basic biochemical systems in the human body.

Reference Texts

- 1) Harvey, R., & Ferrier, D. (2011). Lippincott's Illustrated Reviews. Biochemistry (5th ed.). Lippincott Williams & Wilkins, USA.
- 2) Berg, J.M., Tymoczko, J.L., & Stryer, L. (2007). Biochemistry (6th ed.). W.H. Freeman and Company.
- 3) Devlin, T. (2002). Textbook of Biochemistry with Clinical Correlations (5th ed.).
- 4) Champe, P.C., & Harvey, R.A. (2008). Lippincott's Illustrated Reviews: Biochemistry (4th ed.) Lippincott Williams & Wilkins, USA.
- 5) Lehninger, A.L., Nelson, D.L., & Cox, M.M. (2003). Principles of Biochemistry (2nd ed.). Worth Publishers, New York.
- 6) Montgomery, R., Conway, T.W. & Spector, A.A. (2006). Biochemistry: A Case-oriented Approach (10th ed.) Mosby.

Course Coordinator

Dr. Leong Kok Hoong

Course Assessment

OIAI004: Anatomy and Physiology

3 credits

Learning Outcomes

At the end of the course the students are able to:

- 1) describe the overall organization, function, and anatomy of the human body (cells, tissues, and organs).
- 2) outline the function and the importance of each of the following systems: endocrine, cardiovascular, lymphatic, digestive, urinary, reproductive, nervous, and respiratory systems.
- 3) discuss the fundamentals of homeostasis and its importance in regulating normal physiology.

Course Synopsis

Students will be exposed to the main anatomical and physiological systems in a human body after being introduced to the basic knowledge of physiology and anatomy.

Reference Texts

- 1. Tortora, G. J., & Bryan H. D. (2009). Principles of Human Anatomy and Physiology (12th ed.). John Wiley & Sons, Inc.
- 2. Sukkar, M.Y., El-Munshid, H.A., & Ardawi, M.S.M. (2000). Concise Human Physiology (2nd ed.). Blackwell Science.
- 3. Guyton. A.C., & Hall, J.E. (2011). Textbook of Medical Physiology (12th ed.). W.B. Saunders Co., USA.
- 4. Pocock, G., Richards, C.D., & Richards, D.A. (2013). Human Physiology. Oxford.
- 5. Barret, K.E., Barman, S.M., Boitano, S., & Brooks, H. (2012). Review of Medical Physiology (24th ed.). McGraw Hill.
- 6. Mohd Noor, N. (2014). Ilustrated Human Physiology. Pearson.

Course Coordinator

Dr. Amira Hajirah Abdul Jamil

Course Assessment

OIA1005: Introduction to Pharmacy

2 credits

Learning Outcomes

At the end of the course students are able to:

- 1) describe the career spectrum of the pharmacy profession in Malaysia.
- 2) discuss the roles of a pharmacist in promoting good health and appropriate drug usage in the context of the Malaysian healthcare system.
- 3) identify current issues and challenges relating to the pharmacy profession.

Course Synopsis

This module introduces the history and development of pharmacy profession in Malaysia. The various fields of pharmacy and the roles of a pharmacist in each field will be described. Some sources of information related to pharmacy requirements and challenges related to this profession will be discussed.

Reference Texts

- 1) British National Formulary (BNF), British Medical Association, latest edition.
- 2) Lund, W. (1994). The Pharmaceutical Codex: Principles and Practice of Pharmaceutics (12th ed.). Pharmaceutical Press, London.
- 3) Martindale, W. The Extra Pharmacopoeia (Latest edition). Pharmaceutical Press, London.
- 4) Pharmacy Legislation of Malaysia, Malaysian Pharmaceutical Society.
- 5) Collett, D.M., & Aulton, M.E. (1990). Pharmaceutical Practice. Churchill Livingstone.

Course Coordinator

Mrs. Syireen Alwi

Course Assessment

Course will be assessed by Continuous Assessment 100%.

YEAR I SEMESTER II (2019/2020)

OIA1006: Drug Action and Discovery

3 credits

Learning Outcomes

At the end of the course students are able to:

- I) explain the principles of drug action based on the concepts of pharmacodynamics and pharmacokinetics.
- 2) discuss how the molecular structure and the physico-chemical properties of organic compounds affect drug action.
- 3) describe the strategies involved in drug discovery.

Course Synopsis

This module introduces the principles of drug action and how the physico-chemical properties of organic molecules underlie drug design and action.

Reference Texts

Dr. Heh Choon Han

Course Assessment

OIA 1007: Microbiology and Parasitology

2 credits

Learning Outcomes

At the end of the course students are able to:

- 1) identify the basic microbiology and morphology of bacteria.
- 2) recognise the genetic, classification, reproduction, and importance of pathogenesis of microbial infections.
- 3) explain basic parasitology, structure, and classification of parasites.
- 4) demonstrate an understanding on the pathogenesis of parasitic infections and the mechanism of action of drugs against the parasites.

Course Synopsis

This module provides the knowledge on the various aspects of microbiology and parasitology including important parasites in Malaysia, epidemiology, brief life cycle, brief diagnosis, symptom and treatment and mechanism of action of drugs against different parasites. This module provides an opportunity to learn about aseptic, isolation and identification techniques of micro-organisms, and factors that affect its development.

Course Assessment

OIA1008: Physical Pharmacy

3 credits

Learning Outcomes

At the end of the course students are able to:

- I) recognise the concept of the disperse systems, surface phenomena, micromeritics and rheology, and factors influencing stability of disperse systems.
- 2) describe the mechanism of action of surface active agents, rheology properties of pharmaceutical materials and the application of the disperse systems, surface phenomena, and micromeritics and rheology in pharmaceutical formulations.
- 3) determine the stability of disperse systems, critical micelle concentration, powder characteristics, and viscosity of pharmaceutical materials.

Course Synopsis

The module introduces the basic principles of physical pharmacy required in the pharmaceutical formulations. The physicochemical properties of pharmaceutical materials together with the methods to determine their properties are also included. Students will perform laboratory works that are related to the topics given in the lectures, namely disperse systems, surface properties, and micromeritics and rheology.

Course Assessment

OIA 1009: Pharmacotherapy for EENT and Haematological Disorders

2 credits

Learning Outcomes

At the end of the course students are able to:

- 1) describe the mechanisms of drug interactions, adverse drug reactions, as well as the pathophysiology and management of eye, ear, nose and throat (EENT) and haematologic disorders.
- 2) explain the mechanisms of action, pharmacokinetic properties, adverse effects and drug interactions of drugs used in EENT and haematology disorders.
- 3) interpret laboratory test results with the principles of patient management.
- 4) solve pharmaceutical care issues for these disorders.

Course Synopsis

This module is designed to help students understand the mechanisms of drug interactions and adverse drug effects. The pathophysiology and management of fever, eye, ears, nose and throat (EENT), as well as haematologic disorders will also be emphasised.

Course Assessment

YEAR 2 SEMESTER I (2020/2021)

OIA2001: Medicinal Chemistry

2 credits

Learning Outcomes

At the end of the course students are able to:

- 1) explain the biological activity of the major drug classes.
- 2) describe the development of important drugs in the major drug classes and their structureactivity relationships.
- 3) predict the activity of analogues of important drugs based on their chemical structures.

Course Synopsis

This module deepens the understanding of the physicochemical concepts, which underlie drug design and action.

Course Coordinator

Assoc. Prof. Dr. Najihah Mohd Hashim

Course Assessment

OIA2002: Pharmaceutical Analysis

3 credits

Learning Outcomes

At the end of the course students are able to:

- 1) recognise the concept of monographs and pharmacopeia standard.
- 2) describe the principles of major analytical methods.
- 3) apply major analytical methods in structural determination and quality control.

Course Synopsis

The module introduces the principles and analytical technique of practice, which are used in drugs quality control, dosage form, and research and development.

Reference Texts

Course Assessment

OIA2003: Pharmaceutical Dosage Form Design for Liquids and Semi-solids

2 credits

Learning Outcomes

At the end of the course students are able to:

- recognise the concepts and the industrial manufacturing process of liquid and semi-solid dosage forms.
- 2) prepare liquid and semi-solid dosage forms in laboratory scale.
- 3) perform physical quality control evaluations for liquid and semi-solid dosage forms.

Course Synopsis

The module introduces to the students the overall concept on liquid and semi-solid dosage forms. Students will be introduced to equipment used in manufacturing of liquid and semi-solid dosage forms. Students will prepare liquid and semi-solid dosage forms in laboratory scale together with the evaluation for physical qualities.

Reference Texts

Course Assessment

OIA2004: Pharmacotherapy for Gastrointestinal and Respiratory Disorders

3 credits

Learning Outcomes

At the end of the course students are able to:

- 1) describe the pathophysiology and management of gastrointestinal and respiratory disorders.
- 2) explain the mechanisms of action, pharmacokinetic properties, adverse effects and drug interactions of drugs used in gastrointestinal and respiratory disorders.
- 3) interpret laboratory test results with the principles of patient management.
- 4) solve pharmaceutical care issues for these disorders.

Course Synopsis

This module is one of a series of modules that integrates the discipline of pharmacology and clinical pharmacy. In this module, pharmacology of gastrointestinal and respiratory drugs, and clinical management of gastrointestinal and respiratory disorders will be covered. Students will be introduced to the concept of management of various gastrointestinal and respiratory disorders such as peptic ulcer disease, hepatic disorders, inflammatory bowel disease, asthma, and chronic obstructive airway disease (COAD).

Course Assessment

OIA2005: Pharmacotherapy for Infectious Diseases I

2 credits

Learning Outcomes

At the end of the course students are able to:

- I) discuss the pathophysiology and management of infectious diseases of various organ systems, such as gastrointestinal, respiratory, urogenital, cardiovascular, and central nervous system.
- 2) explain the mechanisms of action, pharmacokinetic properties, adverse effects, and drug interactions of drugs used in infectious diseases.
- 3) interpret laboratory test results with the principles of patient management.
- 4) solve pharmaceutical care issues involving infectious diseases.

Course Synopsis

This module is one of the series of modules that integrates the discipline of pharmacology and clinical pharmacy. In this module, pharmacology of antimicrobials and clinical management of infectious diseases will be discussed. Students will be introduced to the concept of management of infectious diseases in various organ systems such as infections of the cardiovascular, respiratory, gastrointestinal, and central nervous system.

Course Assessment

YEAR 2 SEMESTER II (2020/2021)

OIA2006: Chromatography, Electrochemistry and Radiochemistry

2 credits

Learning Outcomes

At the end of the course students are able to:

- 1) explain the use of the concepts of electrochemistry in pharmaceutical analysis.
- 2) apply the principles of chromatography.
- 3) apply the concepts of radiochemistry to pharmacy.

Course Synopsis

The module is the continuation of pharmaceutical analysis, to introduce the principles and analytical techniques, which are used in the quality control of drugs and their dosage forms and research and development.

Course Coordinator

Dr. Leong Kok Hoong

Course Assessment

OIA2007: Pharmacognosy

2 credits

Learning Outcomes

At the end of the course students are able to:

- I) relate the importance of bridging allopathic systems of medicine with traditional systems of medicine.
- 2) interpret the cell types, cell inclusions, and the metabolic pathways of secondary metabolite production in plants.
- 3) recognise the phytoconstituents with suitable examples and plants used in Homoeopathic, Chinese, Ayurvedic, and Malay systems of medicine.
- 4) demonstrate the methods of herbal drug evaluation and standardization.

Course Synopsis

This module provides the overview of potential natural sources of drugs and development of natural drugs in the form acceptable to allopathic system of medicine especially from plants. The relationship between the biogenetic pathways and pharmaceutically important secondary metabolites is explained. The module also emphasises on the concepts and techniques in standardization of plant drugs. Aspects on quality control are introduced. The effect of period of collection, method of storage, and processing on the quality of plant drugs will also be explained.

Course Assessment

OIA2008: Sterile Pharmaceutical Dosage Form Design

2 credits

Learning Outcomes

At the end of the course students are able to:

- 1) recognise the concept of sterile dosage forms, industrial manufacturing process, and process control of sterile dosage forms.
- 2) prepare sterile pharmaceutical dosage form extemporaneously using aseptic technique.
- 3) perform compendial and non-compendial quality control (QC) tests for sterile dosage forms.

Course Synopsis

Students will be introduced to the overall concept and calculations on sterile dosage forms. Students will be introduced to equipments used in the manufacturing and requirement of the manufacturing plant for sterile dosage forms. Students will be given the chance to use the equipment available for practicals in preparation of this dosage form. Students will do hands-on quality control tests and extemporaneous preparation of sterile dosage forms.

Course Assessment

OIA2009: Basic Immunology and Pharmacotherapy for Immune Disorders

2 credits

Learning Outcomes

At the end of the course students are able to:

- I) discuss the concepts of immunology, pathophysiology, and the management of hypersensitivities and various immune disorders.
- 2) explain the mechanisms of action, pharmacokinetic properties, adverse effects, and drug interactions of drugs used in various autoimmune disorders.
- 3) interpret laboratory test results with the principles of patient management.
- 4) solve pharmaceutical care issues related to these disorders.

Course Synopsis

This module is one of a series of modules that integrates the discipline of pharmacology and clinical pharmacy. In this module, pharmacology of drugs act on the immune system and clinical management of autoimmune disorders will be discussed. Students will also be introduced to the concept of basic immunology, such as inflammation, antigen and immunogenicity, cold-chain reactions and immunization and vaccination.

OIA2010: Pharmacotherapy for Infectious Diseases II

2 credits

Learning Outcomes

At the end of the course students are able to:

- I) discuss the pathophysiology and management of infectious diseases caused by viruses, fungals, and mycobacterias.
- 2) explain the mechanisms of action, pharmacokinetic properties, adverse effects, and drug interactions of drugs used in infectious diseases caused by these organisms.
- 3) interpret laboratory test results with the principles of patient management.
- 4) solve pharmaceutical care issues involving infectious diseases.

Course Synopsis

This module is one of the series of modules that integrates the discipline of pharmacology and clinical pharmacy. In this module, the pharmacology of antimicrobials and clinical management of infectious diseases will be discussed. Students will be introduced to the concept of management of infectious diseases caused by viruses, fungi, and mycobacteria. The mechanism of antibiotic resistance, antibiotic policy, and surgical prophylaxis are also given emphasis.

YEAR 3 SEMESTER 1 (2021/2022)

OIA3001: Solid Pharmaceutical Dosage Form Design

3 credits

Learning Outcomes

At the end of the course students are able to:

- 1) recognise the concept of solid dosage forms.
- 2) recognise the industrial manufacturing process and process control of solid dosage forms.
- 3) perform compendial and non-compendial quality control (QC) tests for solid dosage forms.
- 4) describe the types, usage, and storage of solid dosage forms.

Course Synopsis

Students will be introduced to overall concept and characteristics of solid pharmaceutical dosage form. Students will be introduced to all basic equipments involved in the manufacturing of solid pharmaceutical dosage form. Student will be trained hands-on in optimization of formulation and manufacturing of solid dosage forms using the facilities in the pilot plant. Students will be also trained to do quality control tests of solid dosage forms.

OIA3003: Extemporaneous Preparations

2 credits

Learning Outcomes

At the end of the course students are able to:

- 1) interpret prescriptions.
- 2) prepare formulations following standards from BNF and BPC.
- 3) design conventional formulations of extemporaneous preparations.
- 4) demonstrate the good dispensing practice.

Course Synopsis

Most of the content of this module involves practical session of dispensing of extemporaneous preparations of various dosage forms (solid, liquid, semi-solid). Students will be trained in reading and screening prescriptions. Methods of dosage calculation, dispensing instructions, and labeling of extemporaneous preparations are also included.

OIA3004: Principles and Applications of Pharmacokinetics

2 credits

Learning Outcomes

At the end of the course students are able to:

- 1) describe the different approaches in pharmacokinetic analyses.
- 2) determine pharmacokinetic parameters by interpreting the relationship between dosing regimen and time course of serum, plasma, or other body fluid drug concentration data.
- 3) formulate appropriate dosing regimens utilizing derived pharmacokinetic parameters in specific patient demographics and organ function.

Course Synopsis

This module is designed to help students to understand the principles of pharmacokinetics, and to apply these principles to pharmacy practice including therapeutic drug monitoring of specific drugs, leading to the quality use of drugs and better patient outcome.

OIA3005: Pharmacotherapy for Endocrine Disorders

3 credits

Learning Outcomes

At the end of the course students are able to:

- 1) describe the pathophysiology and management of endocrine and metabolic disorders.
- 2) explain the mechanisms of action, pharmacokinetic properties, adverse effects, and drug interactions of drugs used in endocrine and metabolic disorders.
- 3) interpret laboratory test results with the principles of patient management.
- 4) solve pharmaceutical care issues for these disorders.

Course Synopsis

This module is one of a series of modules that integrates the discipline of pharmacology and clinical pharmacy. In this module, pharmacology of endocrine drugs and clinical management of endocrine disorders will be covered. Students will be introduced to the concept of management of various endocrine disorders such as diabetes mellitus, diabetes insipidus, thyroid and parathyroid disorders, adrenal, pituitary and hypothalamus glands disorders, obesity, and osteoporosis.

Course Assessment

OIA3006: Anaesthesia and Pharmacotherapy for Neurological Disorders

2 credits

Learning Outcomes

At the end of the course students are able to:

- I) describe the pathophysiology and management of neurological disorders, as well as principles of the premedication and anaesthesia.
- 2) explain the mechanisms of action, pharmacokinetic properties, adverse effects, and drug interactions of drugs used in neurological disorders, local, and general anaesthetics.
- 3) interpret laboratory test results with the principles of patient management.
- 4) solve pharmaceutical care issues for these disorders.

Course Synopsis

This module is one of a series of modules that integrates the discipline of pharmacology and clinical pharmacy. In this module, the clinical management of neurological disorders, principles of premedication and anaesthesia, as well the pharmacology and application of related drugs will be covered. Students will be introduced to the concept of management of various neurological disorders such as Alzheimer, Parkinson, and epilepsy.

Reference Texts

- 1) Katzung, B.G. (2012). Basic and clinical pharmacology (12th ed.). McGraw-Hill.
- 2) Brunton, L., Chadner, B., & Knollman, B. (2011). Goodman and Gilman's The Pharmacological Basis of Therapeutics (12th ed.). McGraw Hill.

Course Coordinator

Dr. Nur Akmarina Mohd Said

Course Assessment

OIA3007: Biostatistics and Epidemiology

2 credits

Learning Outcomes

At the end of the course students are able to:

- 1) calculate and interpret measures of frequency (rates, ratios, incidence, prevalence) and effects (relative risk, odds ratio, absolute risk NNT).
- 2) describe advantages, disadvantages, elements of study design, and appropriate effect measures for various epidemiological study designs.
- 3) identify potential sources of bias and their probable effect on the validity of a study or study findings (selection bias, information bias, confounding).
- 4) detect confounding and effect modification (including stratification, randomization, matching).

Course Synopsis

Introduces biostatistical and epidemiological concepts necessary for the interpretation, evaluation, and communication particularly applicable to biomedical health sciences. Topics include: descriptive statistics, estimation and hypothesis testing, correlation, regression, contingency tables, graphical data displays, introduction to SPSS, biomedical study design, randomization, control bias, variability, and confounding. Data analysis using SPSS will be an essential component of the module. Students participate in group projects, group discussions, and oral presentations.

Course Assessment

OIA3008: Management Skills for Pharmacists

2 credits

Learning Outcomes

At the end of the course students are able to:

- 1) define a healthy working environment in various settings of a pharmacy profession.
- 2) discuss the basic entrepreneurship skills needed for pharmacists.
- 3) demonstrate the skills in resolving issues through problem solving, conflict, and stress management.
- 4) apply effective management skills such as proper leadership, effective delegation, empowerment, and motivation in real time.

Course Synopsis

Students will be introduced and exposed to the theory of management and its application in the profession of pharmacy.

Course Assessment

OIA3016: Professional Pharmacy Attachment

2 credits

Learning Outcomes

At the end of the course students are able to:

- I) discuss the roles of pharmacists in both hospital pharmacies, and community pharmacies or pharmaceutical industries.
- 2) describe the various services provided in a both hospital pharmacy, and community pharmacy or pharmaceutical industry.

Course Synopsis

This module involves attachment of students to both hospital pharmacy, and community pharmacy or pharmaceutical industry. The student will be familiar with the roles of pharmacists in the various sectors of pharmacy services and also know the activities or services provided by these pharmacies.

Course Assessment

YEAR 3 SEMESTER II (2021/2022)

OIA3010: Advanced Pharmaceutical Dosage Form Design

3 credits

Learning Outcomes

At the end of the course students are able to:

- 1) identify advanced dosage forms, which are new in the market and those in research stage.
- 2) illustrate the use of various types of polymers in the formulation of advanced dosage forms.
- 3) formulate slow release, sustained release, targeted release dosage forms, and those suitable for macromolecular delivery.
- 4) describe the types, usage, and storage of advanced dosage forms.

Course Synopsis

Students will be introduced to overall concept and principles of advanced pharmaceutical products. Students will be introduced to the basic materials and equipment in manufacturing of advanced products. Students will be introduced to various types of advanced products in the market or those that are still in the research pipeline.

Reference Texts

Course Assessment

OIA3011: Pharmacotherapy for Cancer, Pain and Renal Disorders

2 credits

Learning Outcomes

At the end of the course students are able to:

- 1) describe the pathophysiology and management of cancer, pain, and renal disorders.
- 2) explain the mechanisms of action, pharmacokinetic properties, adverse effects, and drug interactions of drugs used in the management of cancer, pain and renal disorders.
- 3) interpret laboratory test results based on the principles of patient management.
- 4) solve pharmaceutical care issues that are relevant to these disorders.

Course Synopsis

This module is one of the series of modules that integrates the discipline of pharmacology and clinical pharmacy. In this module, the pharmacology of drugs used for the clinical management of pain, cancer, and renal disorders will be taught. Students will be introduced to the concepts of the clinical management of various pain disorders, cancers such as solid and non-solid cancers, as well as renal disorders, which include acute kidney injury and chronic renal failure.

Reference Texts

Course Assessment

OIA3012: Pharmacotherapy for Psychiatric Disorders

2 credits

Learning Outcomes

At the end of the course students are able to:

- 1) describe the pathophysiology and management of psychiatric disorders.
- 2) explain the mechanisms of action, pharmacokinetic properties, adverse effects, and drug interactions of drugs used in psychiatric disorders.
- 3) interpret laboratory test results with the principles of patient management.
- 4) solve pharmaceutical care issues for these disorders.

Course Synopsis

This module is one of a series of modules that integrates the discipline of pharmacology and clinical pharmacy. In this module, pharmacology of psychiatric drugs and clinical management of psychiatric disorders will be covered. Students will be introduced to the concept of management of various psychiatric disorders such as depression, anxiety, schizophrenia, and Alzheimer. Substance-related disorders will also be given emphasis.

Reference Texts

- 1) Katzung, B., Masters, S., & Trevor, A. (2012). Basic and Clinical Pharmacology (12th ed.). McGraw Hill.
- 2) Brunton, L., Chadner, B., & Knollman, B. (2011). Goodman and Gilman's The Pharmacological Basis of Therapeutics (12th ed.). McGraw Hill.

Course Coordinator

Dr. Sim Maw Shin

Course Assessment

OIA3014: Evidence-Based Pharmacotherapy

2 credits

Learning Outcomes

At the end of the course students are able to:

- 1) recognise the format, steps, processes, and application of systematic reviews and meta-analysis.
- 2) relate the methodology and statistical concepts associated with systematic reviews and metaanalysis.
- 3) interpret the results of a systematic review and meta-analysis.
- 4) appraise systematic reviews and meta-analysis according to quality criteria.

Course Synopsis

The aim of this module is to provide an introduction to systematic review methodology and critical appraisal skills. Attention will be restricted to the quantitative evaluation of effectiveness in health-related research. Topics include the role of systematic reviews and meta-analysis and their impact, developing a protocol for a systematic review, literature searching, critical appraisal of primary studies and systematic reviews, data extraction synthesis, and meta-analysis. The module will use a combination of group work, discussion, and presentation.

Course Assessment

OIA3015: Pharmacy Ethics and Legislation

2 credits

Learning Outcomes

At the end of the course students are able to:

- 1) apply the different pharmacy legislation in daily carrying on the business of pharmacy.
- 2) apply the requirement of regulatory authority on different pharmaceutical products in Malaysia.
- 3) perform enforcement and court presentation on pharmacy cases in Malaysia.
- 4) relate advice to other professional and the general public on legislation of drug and pharmaceutical in Malaysia.
- 5) practise the professional ethics of pharmacist.

Course Synopsis

Students will be introduced to the concept of basic laws and legislation followed by the understanding of the five Malaysian pharmaceutical legislations. These legislations govern the control on chemical and pharmaceutical material, medicine, advertisement of medicine and medical matters, and the professional ethics of pharmacist.

Reference Texts

- 1) The Poisons Act 1952.
- 2) The Medicines Advertisement and Sales act 1956.
- 3) The Drug sales Act 1952.
- 4) Registration of Pharmacists Act 1951.

Course Assessment

YEAR 4 SEMESTER I (2022/2023)

OIA4001: Pharmaceutical Quality Assurance

2 credits

Learning Outcomes

At the end of the course students are able to:

- I) describe the Quality System enforced on pharmaceutical manufacturers, wholesalers, and importers.
- 2) discuss the requirement of Quality System for analytical laboratories.
- 3) explain the validation technique for manufacturing process and quality control in pharmaceutical industry.

Course Synopsis

Students will be introduced to the overall concept of Quality Assurance, the need of Quality Assurance in Pharmaceutical Industries and its applications. Student will be introduced to the concept of GMP plan layout for the manufacturing facility of dosage forms. Students will be introduced to different elements of Quality Assurance, principles of GMP, GLP, GSP and their regulations. International standards of quality and their relevance to Quality Assurance will be explained

Reference Texts

Assoc. Prof. Dr. Mohamed Ibrahim Noordin

Course Assessment

OIA4002: Pharmacoeconomics

2 credits

Learning Outcomes

At the end of the course students are able to:

- 1) explain different methods of economic evaluations of health care programmes.
- 2) determine the different types of costs that relate to different perspectives used in economic evaluations.
- 3) critically appraise published economic evaluations of health care programmes for health care decision making.

Course Synopsis

Students will be taught the key principles of pharmacoeconomics and be exposed to issues relating to the delivery of health care. The use of data from economic evaluations to inform health care decision making will be discussed.

Reference Texts

Course Assessment

OIA4004: Hospital and Community Pharmacy Practice

3 credits

Learning Outcomes

At the end of the course students are able to:

- 1) describe the roles of hospital and community pharmacists.
- 2) evaluate common health problems presented at community pharmacies and provide appropriate counselling.
- 3) interpret screening tests such as blood glucose levels.
- 4) perform prescriptions screening and resolve any discrepancies.

Course Synopsis

The roles of hospital and community pharmacists will be explained in detail. Students will be trained to check prescriptions thoroughly and to prevent medication errors. Emphasis will be placed on therapeutic uses of drugs, abnormal doses, drug-drug interactions, and contraindications. Issues related to medication adherence will be emphasised. The general structure of a community pharmacy including benchmarking requirements will be discussed. Measures to encourage the general public on self-care will be provided. Screening tests such as blood glucose tests will be explained. Some common minor health ailments and general principles of responding to symptoms in a community pharmacy will be discussed. Methods of counselling and interactions between a pharmacist with patients and doctors will be emphasised through role-play.

Course Assessment

OIA4005: Clinical Clerkship I

2 credits

Learning Outcomes

At the end of the course students are able to:

- 1) demonstrate an understanding of medical case reports of patients.
- 2) interpret laboratory results with regards to the pathophysiologic changes due to diseases.
- 3) identify the pharmaceutical care issues from the clerked cases.
- 4) apply the principles of drug management to resolve pharmaceutical care issues associated with it.

Course Synopsis

This module includes clerkships at the wards in University Malaya Medical Centre (UMMC). The focus of this module is on clerkship and clinical case presentation by the students in order to further equip them to provide pharmaceutical care to patients.

Reference Texts

Miss Mary Lee Hong Gee

Course Assessment

OIA4006: Research Methodology

2 credits

Learning Outcomes

At the end of the course students are able to:

- I) recognise the basic principles of research, various types of research, and the importance of research ethics.
- 2) manage relevant information from multiple sources.
- 3) produce a written research protocol and an oral protocol presentation.

Course Synopsis

Students will be introduced to various types of research, e.g. laboratory-based, technology-based, and social research that involve survey work. Besides being exposed to methods for protocol writing and usage of referencing manager, students will also be exposed to the importance of ethics in research. This module will prepare the students for Research Project module in the coming semester.

YEAR 4 SEMESTER II (2022/2023)

OIA4007: Industrial Pharmacy and Regulatory Control

2 credits

Learning Outcomes

At the end of the course students are able to:

- 1) compare the trend and forecast of the global pharmaceutical industry to that in Malaysia.
- 2) describe the process of drug registration with the National Pharmaceutical Control Bureau of Malaysia.
- 3) discuss the techniques and requirements of research in production of generic products.

Course Synopsis

Students will be introduced to the concept of comprehensive characteristics of the pharmaceutical industry in Malaysia and compare that with developed countries. Students will be introduced to Malaysian pharmaceutical regulatory control, method of registration, and legal issues. Students will be introduced to the principles of drug development, at laboratory level, pilot scale level, at the factory level, and the process of "scaling-up".

OIA4008: Clinical Clerkship II

2 credits

Learning Outcomes

At the end of the course students are able to:

- I) identify specific characteristics in age or disease-related changes that need special attention with regards to optimizing drug therapy and minimizing adverse drug reactions.
- 2) evaluate the drug therapy for patient care in the ward.
- 3) formulate an effective therapeutic management plan for drug and non-drug treatment for a particular disease state.

Course Synopsis

This module is a continuation of the Clinical Clerkship I. The learning for this module is based on ward visits and discussion with the clinical preceptors. The focus of this module is on the clerkship and the clinical case presentation by students in order to further equip them to provide pharmaceutical care to patients.

Reference Texts

Course Assessment

OIA4009: Research Project

6 credits

Learning Outcomes

At the end of the course students are able to:

- 1) apply the principles of research in carrying out data collection.
- 2) analyse data correctly.
- 3) compose research findings.
- 4) critique research findings in relation to published literature.
- 5) produce a written dissertation according to the requirements and an oral presentation of the research findings using audiovisual aid.

Course Synopsis

Students will carry out their research project under the supervision and guidance of the respective lecturers in the Dept. of Pharmacy. They will collect data, analyse them and write up their dissertations. Every student will also present their work orally.
